

# LANGDON BROS. SEED

## LAWN SEED BLENDS & MIXES

### WEAR GREEN BLEND #1 Seller

Seed Rate: 7-9#/1000 sq ft = 300-390#/acre (Max. 450#/acre)

#### **DROUGHT TOLERANT & LOW MAINTENANCE**

Our Most Drought Tolerant blend, Wear Green, has put our lawn seed program on the map in central Indiana. Wear Green is a 100% turf type tall fescue blend containing three of the number one varieties in the National Turf Evaluation Program. The superior genetics in Wear Green give your lawn the best available genetic color, spring density, drought recovery, and the superior color under summer stress versus other grass species. A mature Wear Green lawn mowed at 3-4 inches will smother out most weeds and keep crabgrass at a bare minimum. Wear Green has a wider blade than bluegrass, but has much deeper roots which helps your lawn maintain color during short periods of drought. Wear Green handles full sun and clay soils better than any other turf blend in our lineup. Wear Green responds best under a regular fertilizer program.

There may be other blends with turf type tall fescue, but none are equal or superior to the combination in Wear Green.

*Wear Green is also treated with Apron fungicide to protect your new grass from seedling disease for the first 21 days*

**Wear Green contains 1 new SRP Self Repairing & 1 new AST Aggressive Spreading tall fescue varieties!!**

*Wear Green should not be used with other grasses due to texture differences.*

### TRADITIONAL MIX #2 Seller

Seed Rate: 5-6#/1000 sq ft = 225-250#/acre

#### **Good to overseed older bluegrass/ryegrass lawns.**

Contains 40% Fine leaved perennial ryegrass, 40% Common Kentucky bluegrass, and 20% Creeping red fescue. Most older lawns contain a combination of bluegrass, ryegrass, and creeping red fescue. Traditional Mix usually matches the color and texture of these older lawns without being noticeably darker or coarser.

**Traditional Mix is also a good choice for a new lawn.**

Traditional Mix gives you the fine soft texture, look, and feel many of you like with a good medium green color.

*Traditional Mix is treated with Apron fungicide.*

### SHADY GREEN EXTREME MIX

Seed Rate: 4-5#/1000 sq ft = 175-225#/acre

#### **New & Improved formula for the fall of 2019!**

Shady Green Extreme Mix is a beefed up version of the original Shady Green Mix. A combination of 6 shade tolerant species mixed together to battle the number one toughest place our customers find to grow their lawn, shade. Lack of sunlight and water often make it extremely hard to grow grass. Shady Green Extreme contains 30% Improved Creeping Red Fescue, 25% Chewing Fescue, 15% Hard Fescue, 10% Shade tolerant Bluegrass, 10% of another Improved Creeping Red Fescue, & 10% Shade tolerant Fine Leaved Perennial Ryegrass.

**Shady Green Extreme Mix is treated with Apron fungicide.**

### TRENDSETTER MIX Dark color

Seed Rate: 5-6#/1000 sq ft = 225-250#/acre

#### **GOLF COURSE FAIRWAY QUALITY**

Dark green color and a fine soft texture make Trendsetter very appealing for a new lawn or to improve the color of an established ryegrass/bluegrass lawn. Trendsetter can make you the envy of the neighborhood, but at a price. Most ryegrass/bluegrass lawns require extra care to prevent crabgrass, disease, weeds, and may require irrigation to maintain color during periods of drought. Trendsetter contains 60% fine leaved perennial ryegrass and 40% Kentucky bluegrass. The difference is that these varieties are some of the newest releases selected especially for their genetic color.

Trendsetter has the most genetic color in our lineup. You can overseed an entire lawn with Trendsetter, but do not patch random bare spots in an older medium color lawn because those spots will end up looking darker than the rest of the lawn. *(Trendsetter seed is treated with Apron fungicide.)*

### FAIRWAY 4 BLEND \*ExecuTurf brand\*

Seed Rate: 7-8#/1000 sq ft = 300-350#/acre

#### **FAST ESTABLISHMENT**

100% Fine leaved perennial ryegrass blend containing four of the genetically darkest ryegrasses in the NTEP trials. Fairway 4 Blend provides quick establishment and fine texture. The ryegrasses are bred for soft fibers so you don't get that "bristle top" effect as you do with other grasses. These 4 grasses are very disease resistant ryegrasses for a beautiful lawn. Fairway 4 is a good option when you need a lawn in a hurry. You can always overseed with bluegrass next spring to give you a long term solid lawn. *Fairway 4 is not treated seed.*

### CONTRACTOR'S MIX

Seed Rate: 6-7#/1000 sq ft = 250-300#/acre

#### **GOOD VALUE**

70% Fine leaved perennial ryegrass, 20% annual ryegrass, and 10% common bluegrass. This is a quick lower cost mix. A good mix for clean up work on a construction site.

*Contractor's Mix is not treated seed.*

**\*When overseeding an existing lawn use 1/2 rate of the mix or blend you are using.\***
