

# LANGDON BROS. Brand LAWN FERTILIZER

# TURBO-GREEN

- Contains: \* 40% Slow Release nitrogen. Extends color and feeding period of each application.  
**24-0-8** \* 4% Iron for EXTRA GREEN UP without extra top growth or burning, especially June application.  
 \* High percent of potash to improve your lawns immune system and build tensile strength.  
 \* Micro nutrients to improve the health. Most fertilizers don't contain these nutrients.

**24-0-8**

CORNMAN APPROVED

(We can tailor a plan to fit your schedule and budget, but here are our ideal plans.)

## OUR PREMIUM MAINTENANCE FERTILIZER PLAN

<u>PRODUCT</u>	<u>APPLICATION DATE</u>	<u>APPLICATION RATE</u>	<u>COMMENTS</u>
TURBO-GREEN <b>1</b>	April 1 - April 25	150-200 lbs./acre	Greens up the lawn and helps build the root system for the summer ahead.
TURBO-GREEN <b>2</b>	Late May - Mid June	150 lbs./acre	Iron works best now to give extra green up. We reduce the rate now to avoid disease.
TURBO-GREEN <b>3</b>	Sept. 1 - Sept. 30	200 lbs./acre	Helps return color and health to the lawn after the summer stress.
TURBO-GREEN <b>4</b>	Mid Oct. - Dec. 1	250 lbs./acre	This application applies the right amount of nitrogen to winterize your roots, and promotes early spring green up.

**Note:** Allow at least 30 days between fertilizer applications.

## PLAN for CONTROL of CRABGRASS, WEEDS, & GRUBS

*\*In stead of using Turbo-Green you may want to apply products to control any of the above problems. Here are our suggestions.\**

<u>PRODUCT/USE</u>	<u>APPLICATION DATE</u>	<u>APPLICATION RATE</u>	<u>COMMENTS</u>
18-0-4 w/DIMENSION Crabgrass Prevention	March 15 - May 1 April 1 - April 15 is the ideal time.	200 lbs./acre	Helps stop the germination of crabgrass seeds.
21-0-7 w/ALLECTUS Grub Prevention	May 15 - July 1 *Note: Spray liquid Trimec Classic now for weed control.*	150 lbs./acre	Control of 1st & 2nd generation grubs. June 1 - July 1 is the ideal time.
19-0-2 w/Trimec Weed & Feed	May 1 - June 15 *Instead of grub control. or Oct. 1 - Oct. 15 *Early Oct. is ideal for weed control.	200 lbs./acre	Apply in May if you don't treat for grubs in May. For control of most broadleaf weeds.
TURBO-GREEN Winterize	Nov. 1 - Dec. 1	250 lbs./acre	Wait a few weeks to winterize if you applied weed & feed in Oct.

We still feel the best control of crabgrass and broadleaf weeds is a thick healthy lawn mowed at 3 - 4 inches. To protect you and the environment chemicals and insecticides should only be used when necessary. DO NOT MAKE 2 APPLICATIONS AT THE SAME TIME. Choose your #1 lawn priority & use one of our applications.
